When she was eight her schoolwork was a disaster, her handwriting was awful, and she **used to fail** all her exams. Her teachers **would complain** about her disruptive behaviour: she **was always fidgeting** and handing in her homework late. They told her mother that she had a learning disorder. So Gillian's mother took her to see a psychologist and listed some of the problems: she never pays attention in class – she **ll get up** and move around instead of listening to the teacher; she **s always disturbing** people and her homework's always late. Finally, the doctor turned to Gillian and said, 'Gillian, I need to speak to your mother privately now. Don't worry. We won't be long.' As they left the room, he turned on the radio on his desk ...

- A Use your imagination
- B Make up a dramatic narrative
- C Learn how to give a speech
- D Imagine what each item tastes like
- E Visualise the items in a familiar place

MEMORY TIPS

Greek philosopher Socrates famously said 'Learning is remembering'. So, how can we improve our memory? The key is to use your imagination. Here are two ways of remembering a shopping list of eight items.

- 1 First, imagine a huge loaf of bread, and suddenly, coffee squirts out of the top and makes a fountain of dark brown liquid. After a few seconds, the dark brown changes to white yoghurt. The yoghurt forms a river and it goes under a bridge – the bridge is a steak. Some black and green olives are crossing the bridge and some big brown eggs are chasing them. The olives hide behind a big carton of orange juice. You lift an olive to your mouth to eat and it turns into an onion which tastes horrible. That's it. You've reached the end.
- 2 Think of your home and get a mental image of the rooms in your house. Then, put the items on the list, one by one, in specific places in the rooms. For instance, you imagine the bread on the doormat as you come in the door. Then you go into the living room and the coffee is in front of the television, the yoghurt is on the sofa and the steak is stuck to the mirror on a wall. And so on, it's all about making personal associations ... you get the idea. This method isn't just useful for memorising shopping lists. Some famous people have used it to give a speech without using notes.

3 **SPEAKING** Test your partner's memory. Follow the instructions to complete the task.

- Write down a shopping list of eight items and give it to your partner.
- Study your partner's list for sixty seconds using one of the methods in Exercise 2.
- Take it in turns to recall your list. Did the tip help?

- 2 On average a person has 70,000 thoughts each day.
- 3 The brain's storage capacity is practically unlimited.
- 4 The brain produces enough electricity to power a small light bulb.
- 5 Most people only use 10 percent of their brain.

HIDDEN TALENTS

1.13

Despite some recent advances, there is still a great deal about the human brain that **remains a mystery**. We know it is made up of about 100 billion nerve cells, called neurons, connected like wires in a giant telephone exchange. We know messages pass down them like electrical signals and jump from one neuron to the next when chemicals known as neurotransmitters are released. ¹ C But what we don't fully understand are things like consciousness, intelligence and creativity.

10 Much of our knowledge comes from studying brain functions when things go wrong. There are some fascinating cases of where a bang on the head has brought about changes in personality or caused a person to become talented in a way they weren't at all before the injury.

15 A famous case was Jason Padgett, a furniture salesman from Washington, who was mugged by two men after leaving a karaoke bar. He survived the attack, but **was left unconscious**. ² E Padgett began to see patterns in everything he looked at, and to draw complex geometric figures. He seemed to understand the mathematical nature of the universe despite the fact that he had little formal academic training. The man who had barely scraped through his school exams ended up pursuing a career in mathematics as a number theorist.

25 Padgett's is a case of acquired savant syndrome, a condition in which brain damage of some kind unlocks extreme mental abilities. All cases of acquired savant syndrome involve a head injury and the special abilities are typically in the fields of maths, languages, music or art. Having **acquired the new skill**, it is extremely rare for a savant to lose it. The change is permanent.

35 Another example of this syndrome is twenty-four-year-old Ben McMahon from Australia, who **fell into a coma** after a car crash. A week later he woke up speaking Mandarin Chinese. He had studied Chinese at school, but had never been fluent until the accident. McMahon works now as a Chinese-speaking tour guide in Australia.

Orlando Serrell **suffered a head injury** when he was knocked out in a baseball game at the age of ten. When he regained consciousness, he felt OK and finished the game. ³ A He has never made a mistake. For instance, ask him about 11 February 1983 and he says 'Friday. It was raining that day. I had a pizza – pepperoni sausage.'

Some knocks on the head are more dramatic than others. Tony Cicoria, an orthopaedic surgeon, **was struck by lightning** as he was leaving a public payphone. Luckily there was a nurse nearby and she saved his life. Several weeks after the accident, Cicoria developed a strong desire to listen to classical piano music and play the piano even though he'd never wanted to play a musical instrument before. He is now a successful pianist and composer.

Although cases of female savants are not as common as those of males, there are some examples. Heather Thompson, a successful businesswoman from Washington, was loading her supermarket shopping into her car when the boot door crashed down onto her head. Although she never **lost consciousness**, the accident changed her life. Soon afterwards she **felt an urge** to paint, and overnight she became a talented abstract artist. She explained that her hands simply knew how to use colour and white spaces – it felt natural to her to paint.

60 There is no single theory to explain each case, but many researchers believe that acquired savant syndrome happens when the right side of the brain compensates for an injury to the left side. The condition is rare – fewer than one hundred cases have been identified. ⁴ D The challenge is how to access that hidden knowledge and skill without experiencing a bang on the head.

To: Jill Duncan (Head of English)

From: Angie Dalton (School Exchange Organiser)

Hi Jill,

- I've been thinking about having a welcome party for the Swiss exchange students. They can come to a get-together in the main hall. Make sure all your staff come along and also could you say a few words? – you know, say hello and tell the visitors a bit about the school and the town. We'll follow this with a bit of food (menu TBC).
- They can come in through the main entrance and we can get our students to say hello and then they can show the exchange students around the school.
- BTW, I've already posted a map and directions on the website.

Thanks, Jill 😊

Angie

Subject: Sigrid Halverson – summer work application
Attachments: Sigrid Halverson CV

Dear Ms Laver,

5 I am writing in response to your online advertisement seeking staff for Chatfield Zoo's summer activities programme. I wish to apply for the position of children's activity coordinator.

I am an eighteen-year-old childcare student and I

10 am passionate about working with children. I intend to pursue a career as a kindergarten teacher when I finish my education. With this in mind, I hope to gain as much relevant experience as possible while I am still a student. I would welcome the opportunity to

15 work with and learn from a successful organisation such as Chatfield Zoo.

I gained considerable work experience at a local kindergarten last summer. During my work placement there, I worked alongside teachers, contributed to

20 classes and supervised the children at break times. I also sat in on staff meetings and coordinated a very successful sports day. Additionally, as a keen athlete and artist, I feel confident I possess relevant skills and would be well suited to the position.

25 I would be delighted to attend an interview at your convenience and have attached my CV for your consideration. Please do not hesitate to contact me if you require any further information.

Yours sincerely,

30 Sigrid Halverson

READING

- 7 Read the text. Complete gaps 1–5 with sentences A–F. There is one extra sentence.

A school with no grades, no homework, no tests and no obligation to attend classes. That's the Brooklyn Free School, a learning institution that follows a 'free' education philosophy. Neither the school's head teacher nor the teaching staff, who are known as advisers, tell the students what to do.

¹ ____ This is based on the school's belief that learning only happens when it is self-directed and not imposed by others.

The school is open to students from three to eighteen years of age. It encourages them to get involved in everything that concerns the school. In order to do so, students attend a Democratic Meeting where they have equal votes with the staff. This get-together is at the heart of the school's philosophy. ² ____ Announcements are made, issues are raised and everyone cooperates for the well-being of the school. Attendance at the weekly meeting is one of the few school rules. Though some of the younger students don't pay much attention, preferring to read or draw instead, they must be present.

A typical school day is different for every student. They can paint, play video games or work on laptops. Some prepare for the school's annual play by rehearsing or building stage sets. In the kitchen, others might be baking a cake or sorting rubbish for recycling. Traditional classroom lessons are also available if students wish to attend. ³ ____ By offering these choices, the school accommodates all needs. Being part of a group of classes on a regular basis fits some students best, while doing individual projects is what suits others.

The school's philosophy is a radical one. Parents hope it will make their children independent thinkers and problem solvers. However, the school's system has its share of opponents. ⁴ ____ This is due to the enormous freedom students have, which can lead to laziness and lack of discipline. Furthermore, they believe that students whose families cannot afford to hire private tutors have fewer chances of gaining college entry. It's believed that the school's academic preparation is inadequate. This seems to be supported by the fact that there are parents who have had to hire help to make sure their children learn the basics. ⁵ ____ Since then, however, enrolments have increased and people are regaining confidence in the idea of self-regulated education and the school's mission.

- A Also, in its first academic year, a third of the original students left, as did the teachers.
- B These are best for students who prefer a structured day along with a weekly timetable.
- C Many students go there to escape the stress and exam pressures of conventional schools.
- D Taking place every Wednesday, it gives staff and students an opportunity to be heard.
