\_\_\_\_\_

## Problem

## 14. READING

A. Read the article. Then read the article again and complete each sentence with words from the box. You will not use all of the words. Use a capital letter when necessary.

**Protect Yourself Online** 

Anyone can access the Internet, including people who want to steal your personal information or harm your computer. Here are some tips to protect yourself:

**Be careful with passwords.** Passwords protect your online accounts (like banking and e-mail) from being accessed by other people. Don't use passwords that are easy to guess, such as your birthday or phone number. Use a different password for every account. Change your passwords about every two months.

**Use a firewall.** A firewall is a software program that checks information coming from the Internet into your computer. If the firewall thinks a piece of information is bad for your computer, it won't let it into your system. You have to set your firewall and tell it what kinds of information are OK to let in.

**Use antivirus software.** Viruses can damage or destroy your computer. Get antivirus software to protect it. Antivirus programs check e-mail attachments for viruses and delete viruses from your hard drive. It's important to update this software regularly.

**Check e-mail attachments.** Attachments can carry viruses. Don't open attachments from anyone you don't know. Use an antivirus program to check all attachments before you open them. Even someone you know can send you an attachment with a virus by mistake.

**Disconnect.** If you follow these tips, you'll be well-protected. But to be even safer, always log off if you don't need to be online.

antivirus software	an e-mail attachment	a firewall	go online
icon	log off	log on	password
		<del>protect</del>	virus

**Example:** It's important to protect your computer from other people on the Internet.

- (1) You should create a new \_\_\_\_\_ for each account you have every two months.
- (2) \_\_\_\_\_ stops bad information from coming into your computer.
- (3) \_\_\_\_\_ removes viruses from your computer.
- (4) A virus can enter your computer through \_\_\_\_\_.

(5) If you're not using the Internet, you should \_\_\_\_\_.

**B. Read the article again. Match each question with the appropriate answer.**

**Example:** Why should you log off if you're not using the Internet? b      a. to check the information that goes into the computer

(6) Why do you need passwords for your accounts? \_\_\_\_      b. to protect yourself even more

(7) Why do you need a firewall? \_\_\_\_      c. to protect it from viruses

(8) Why do you need antivirus software for your computer? \_\_\_\_      d. to stop people from accessing them

**Essay**

15. **Do you think that people's lives are better because of computers? Give reasons to explain your answer. Write at least three sentences.**

ESSAY

15. ANS:

*(Sample response:)* In some ways, I think that people's lives aren't better because of computers. Sometimes people use computers to send e-mails or get information because they don't want to talk to or see a person, but interaction is important. But some people's lives are better with computers. It is much faster, easier, and cheaper to get information on the Internet.
